# Setting up a certificate received from SK on a cryptostick

If you ordered a crypto or e-Seal certificate from SK on a cryptostick, then you should have received a security envelope, which includes cryptostick and administrator password. Administrator password must be entered for first time by following these instructions.
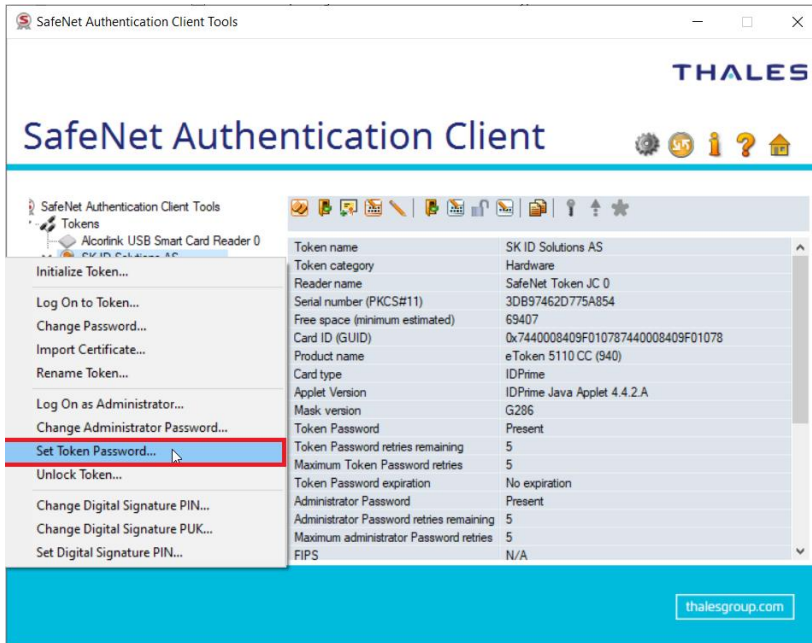

1) Launch SafeNet Authentication Client and click on **Advanced View** icon (Reminds gear wheel)
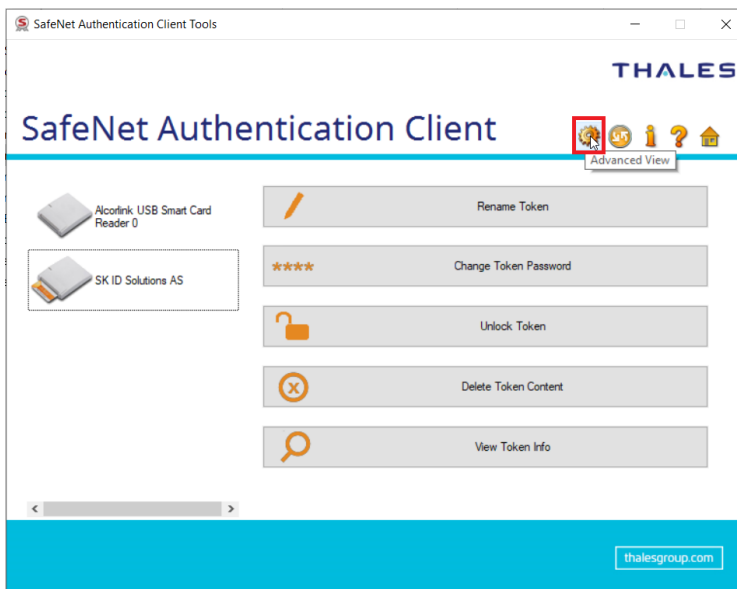

2) Under Tokens (Left side) find and select your cryptostick
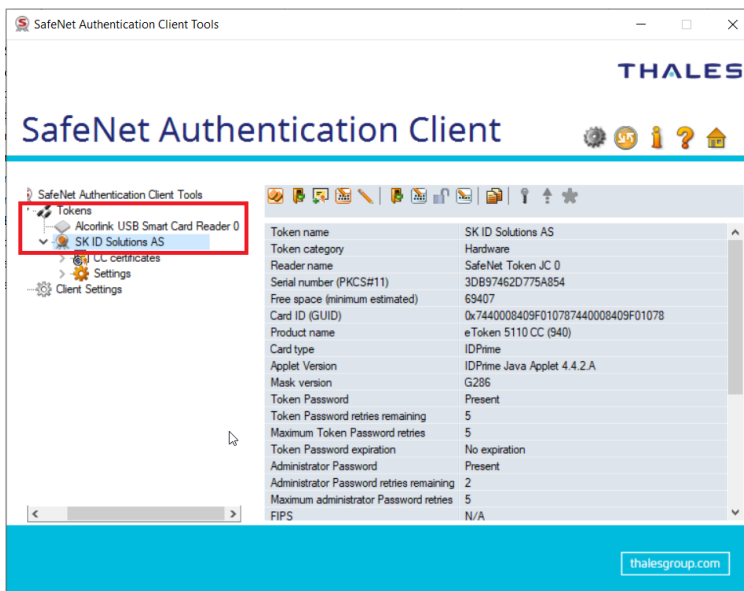

3) Right click on icon and then choose **Set Token Password**

4) New window **Administrator Logon** will be opened. Enter the password (Behind the sticker, on the security envelope). Click **OK** – Cryptostick is ready to be used.

5) Next points are regarding **QSCD e-Seal** – Next you need to add **Digital Signature PIN**.

6) You will be asked for **Digital Signature PUK**. **Digital Signature PUK** is code under the sticker. (Same as administrative password)
After that you can enter **Digital Signature PIN** (It is used to e-seal)

Now you are ready to use the e-Seal!

If you face issues – please send e-mail with description and if possible, a screenshot to support@skidsolutions.eu or in urgent case call +372 610 1883
